ELV AIR CONDITIONING FLUID EXTRACTION UNIT:

Item No: 1988

The Just-Recycling ELV air conditioning fluid extraction unit is ATEX approved and is designed and equipped to handle R134 and R1234 gases.

Our gas removal unit has a robust plastic carrying case and comes with high and low pressure connecting pipes and pipe adapters to handle both types of gas.

The unit is simple to use, connects directly onto the low pressure take off point on the vehicle and requires a standard 240v single phase electrical supply.

An optional alternative 110v powered Just-Recycling ELV air conditioning fluid extraction unit is available and both the 240V and 110V units meet all environmental and electrical requirements.

The Just-Recycling ELV air conditioning fluid extraction unit has 2 x 14kg storage cylinders for the R1234 gas and the R134 gas so you can be up and running immediately.

Price: £ POA + VAT ex works UK
