STOKKERMILL™
RECYCLING MACHINERY

GRANULATOR FLEXI

FLEXI K-140

Installed Power	14 KW
Overall Dimension	1500x1700x2080mm
Weight	1000 Kg
Input Production	100 - 150 Kg/h *

FLEXI K-200

Installed Power	20 KW
Overall Dimension	1500x1700x2130mm
Weight	1200 Kg
Input Production	200 - 250 Kg/h *

* The production can vary according to the screen used and the cables to be shredded

Wire cable granulators FLEXI are chopping machines designed for milling the copper or aluminum cables and sorting the metal from the insulation. FLEXI are available in 2 models with input rates ranging from 100 to 250 kg/h input.
Properly sized drive motors permit to overcome unpredictable load allowing stable operation and low energy consumption.
FLEXI Granulators are equipped with the ML blades mill manufactured from a unique steel block without weldings and available in different configurations with 3 rotating blades and 2 reversible fixed blades.

FLEXI does not require any water cooling thanks to the correct size of all the process components.

FLEXI wire cable granulators are designed to be easily equipped with a TURBO device as second refining step for increasing the production capacity rate.

FLEXI can be put in line with the PS shreddings by a NST conveyor belt.

FLEXI series chopping machines are suitable for processing:

- copper and aluminum cables
- thin cables (i.e., data and telephonic cables, e-waste harness) by using a smaller classifier screen
- pre-shredded copper-aluminum coils and radiators
