New CSX 2010 Cable Stripper: Item No: 25582

Our largest new machine the CSX 2010 cable and wire stripper is a ruggedly engineered cable stripper from the market leading British manufacturer Deltax.

The CSX 2010 is designed and built to turn scrap and waste electric cables and wire into a profitable copper revenue stream.

The fantastic CSX 2010 cable and wire stripper has both a single blade cutting system and a twin blade cutting system.

The double blade cutting system cuts outer cable sheathing both top and bottom for easy liberation of inner cables.

The single blade cutting system is ideal for smaller cables making quick and simple cuts a breeze.

The CS 2010 cable stripper has a stripping capacity of 1.5mm to 115mm (1 /1 6" – 4 1/2") outer cable diameters.

Both stripping systems strip cables via a finely adjustable mechanism at a rate of 35m/p/m – 110ft/p/m.

Powered by a sensible 2.2Kw – 3Hp – 3 phase motor this cable stripper can also be supplied with a convenient single phase motor.

Simple and safe to use our CSX 2010 cable and wire stripper is ideal for recyclers, production workshops site installers and cable manufacturers.

By using our CSX 2010 cable stripper the valuable clean copper centre core or cores are simply removed.

If you have large diameter electric copper wire cables you need to strip you can also take a look at our CSX 2000 machine.
